MR-SUAVE'S FIRST ROOKIE MISTAKE

Challenge Description:

Every developer makes mistakes, some push things unnecessarily to the internet. But even after they delete it, the internet actually remembers.

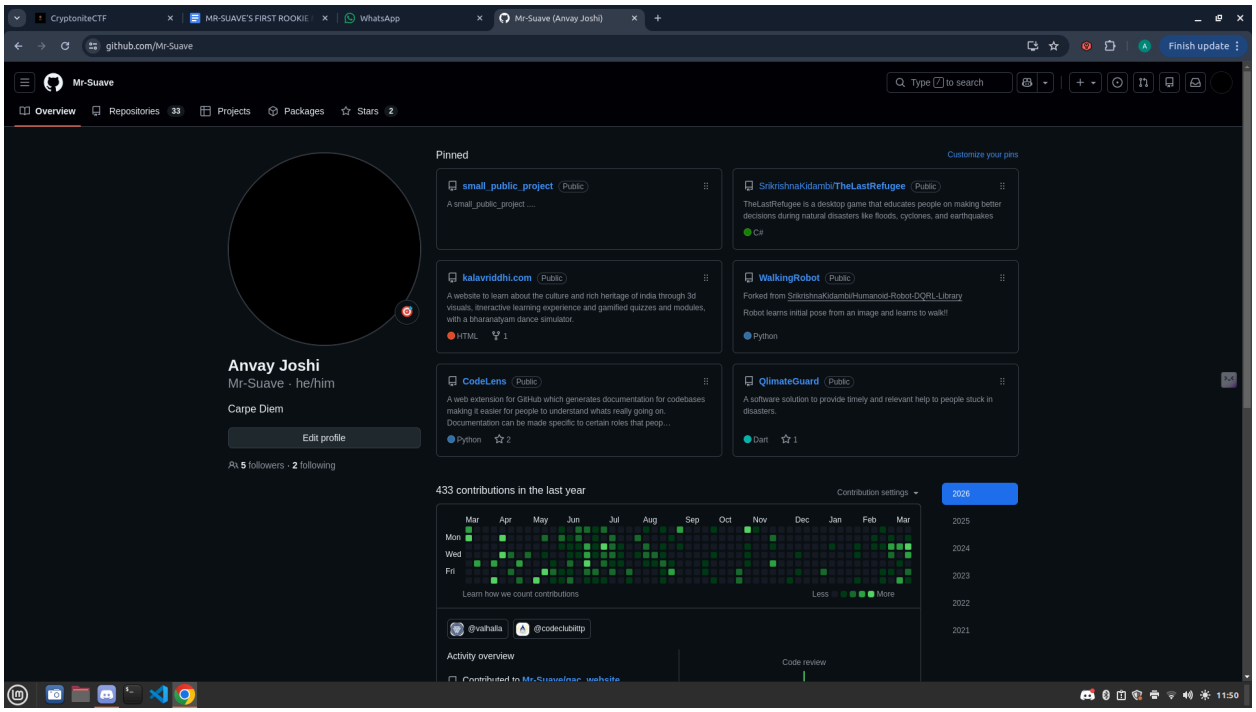
Can you find what Mr-Suave accidentally exposed?

Solution:

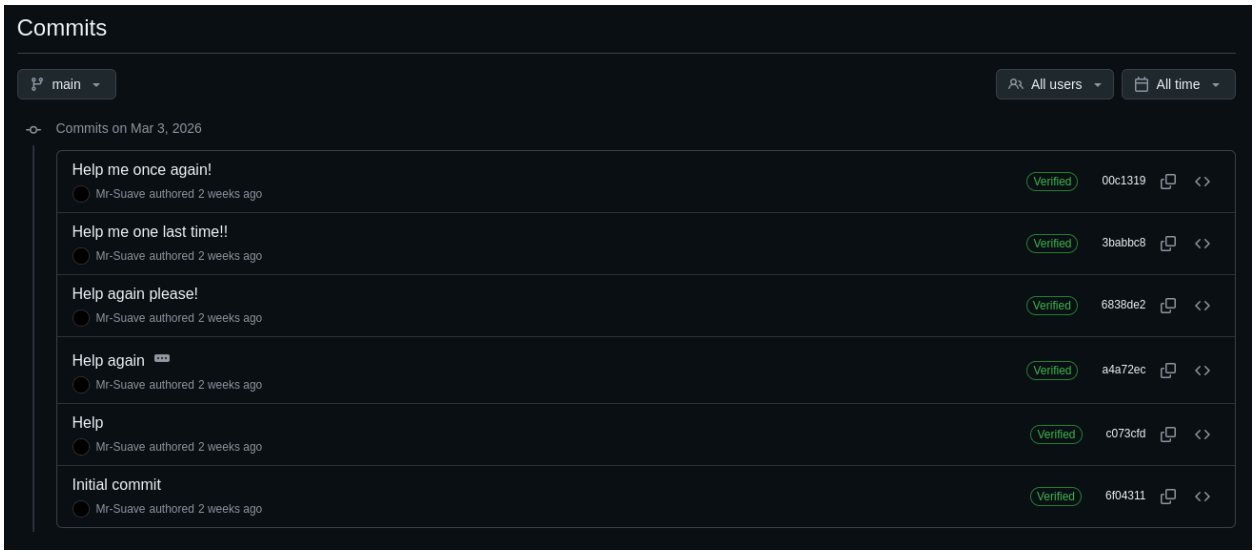
This challenge is hinting towards GitHub repositories with the words - "push" and "the internet actually remembers".

Users "push" commits to GitHub and it remembers their commits (Version Control).

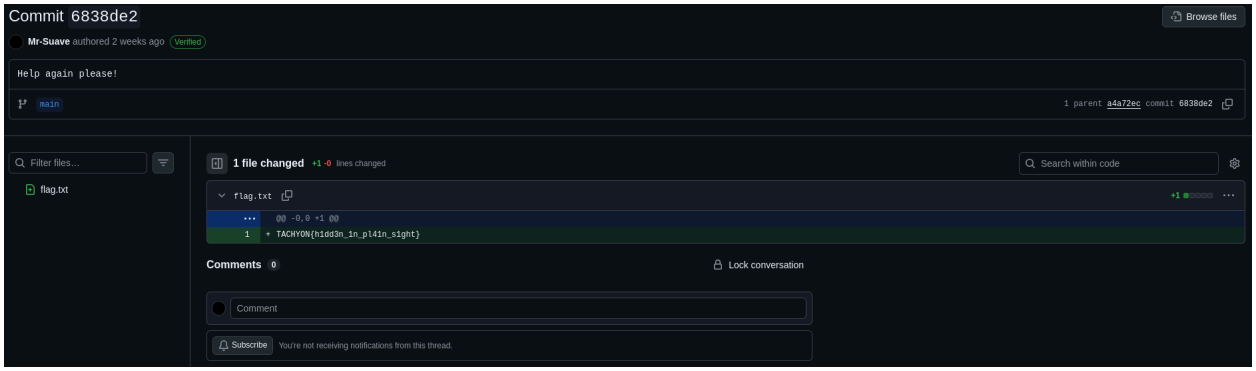
Go to github and search Mr-Suave because that is given in the description - or do a simple Google Search for Mr-Suave GitHub - you will lead to their profile:



Now you can see a small_public_project, inspect its commits to see some fflag.txt that was added and then deleted:
(beware of the decoy flag in the ReadMe!)



Now check the commits:



Flag: TACHYON{h1dd3n_1n_pl41n_s1ght}
